

redi-Group

Measuring technology

Destructive testing

- Universal testing devices for tensile, compression, and bending tests
- Various measuring devices using expansion / strain
- Temperature control units for analyses in high and low temperatures
- Hardness testing devices
- Pendulum impact testing device
- Metallography
- Wet-chemical laboratory
- Optical emission spectrometry
- Radiographic analyses of residual stress, phases, and textures
- Electromechanic and servohydraulic oscillation testing devices
- Corrosion testing
